# Making The Right Choice

Pictured Model is the G-5000

## Size of Table

There is no standard size for a football table but there are some models which are particularly suited to younger children and these include the F-1 and the G-100 which both have height adjustable legs.

## Cabinet

All Garlando tables are manufactured from multilayer plywood or medium density fibreboard (MDF) making them extremely strong and hardwearing. The thicker the cabinet the stronger and more long-lasting the table will be.

## Legs

Thicker legs indicate a stronger table. Most Garlando tables use either thick MDF legs with a melamine coating or metal legs with anti-scratch powder varnish.

## Playing Field

LAMINATE

All models in the Garlando range (with the exception of the G-5000, Pro and Master Champion) are supplied with a plastic laminate playing surface. One of the other main materials used for the playing field is glass but this is a very smooth surface which makes ball control difficult.

## Bearings

Roller bearings are used on all of Garlando's professional tables which make play smoother and reduce wear on the rods.

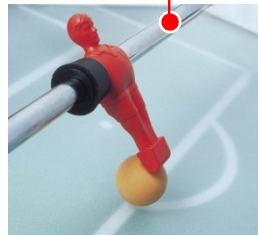

## Leg Levellers

Some tables are supplied with leg levellers as standard whilst on others these can be purchased as an additional item.

## Rotating or Non-Rotating Goalkeeper

This is really a matter of personal choice but all Garlando tables stocked in the UK have a fully rotating (through 360 degrees) goalkeeper. On tables with a non-rotating goalkeeper (180 degrees) the goalkeeping rod is located closer to the goal mouth which makes it easier to defend and fewer goals are scored.

## Rods

Telescopic rods are an important safety consideration when selecting a football table as these prevent the rods from protruding from the opposite side of the cabinet. Rods manufactured from high resistance chromium are stronger and more durable.
